RE: C1-726-219

Dear Mr. Veneroso:

We realize that you contacted us in April concerning data on some of our products. A followup letter was received just recently. During this period we have attempted to comply with your request; however we have been delayed up until now in getting information from some of our suppliers so we hope you understand. At any rate we are enclosing Material Safety Data Sheets on 73X Ink, 73X Reconditioner, 547 Ink and #17 Ink. The #1 stone ink pads contain no inks when shipped and therefore are not a hazardous material. They are just like any other type of stamp pad and can be shipped without any restrictions whatsoever by air.

We hope this information is complete so that your file and ours can be closed in this matter.

Very truly yours,

INDEPENDENT INK, INC.
